

Hong Kong Polytechnic University

12 October 2009

Workshop on Module Design

Diana Laurillard

Abstract

Pedagogic Design for Active Learning

The workshop will build on the work already being carried out at the University to introduce new technologies in order to achieve the strategic objective of employing more student-centred pedagogies to enhance independent learning abilities. The objectives are to enable participants to:

- broaden their approaches to learning design
- match learning technologies to forms of learning
- develop a clear sense of how staff and students can spend their time effectively
- estimate how learning technologies can affect teacher time and learner benefits.

The workshop will be conducted via a mix of presentation, small group work and audience participation. Participants will be asked to answer a few questions online in advance.
